**Euroconsult NT**, 3M and the University of Alcalá, analyze the intricacies of Visualise in the International Road Safety and Road Equipment

Every two years, held at IFEMA the International Road Safety and Road Equipment. This time, Euroconsult NT participated in the October 28 one of the conferences, where professionals released technical aspects related to signaling, the regulation that controls the installation and benefits presented the latest devices on the market contribute to the road.

The presentation focused on the development of Visualise, equipment that measures the brightness nocturnal vertical road signs by artificial vision, and with the participation of the University of Alcalá and 3M. Both companies have worked with NT and SafeControl Euroconsult in its development.

During the exhibition, Fernando Sanchez, deputy director of New Technologies, Emiliano Moreno, head of Institutional Relations and Miguel Angel Sotelo 3M, University of Alcalá, tried the new features introduced in the market the team of auscultation, signage and security road.

Upon completion, these could watch the promotional video Visualise and understand the team close, as was stated in the enclosure.
