

Euroconsult New Technologies strengthens its activities with the acquisition of a top team for the inspection of bridges and structures.

The company continues its race to the bottom to become a pioneer in the world when it comes to auscultation and monitor ing met hods are concerned. The latest venture of the organization for innovation has come directly from Germany and promises to be a revolution.

The Inspection platform articulated 20-meter long and 1.5 meters wide to be found in a truck that can transport to the workplace. This equipment allows access to the underside of the boards of the structures with a traffic court at the top of a lane.

"So far, Spain has performed these works inspection aids requiring access to the board from

the bottom, provided there was access to it, causing major traffic cuts and inspection work slow. With this equipment will improve the work performance and facilitate access to the stacks to a height of 75 meters in a simple, "says Ignacio Poy, Head of Monitoring and Implementation of New Technologies.
